

Premium 10-Stage Water Filter from New Wave Enviro

Tired of bottled water? Ready for fresh & healthy water that is easy on the environment, economical & readily available ...

The Premium 10-stage Water Filter by New Wave Enviro lasts 3 times longer than common carbon-block filters.

Filters 1200 gallons (average life of 1 year for a family of 4.)

Reliable. Removes common contaminants.

* A Conversion Kit is available to mount under the sink.

Premium 10 Stage Water Filter

1	30 micron filter pad	Traps floating solids & sediments, ...i.e. rust
2	8 oz of KDF 55, an alloy	Bacteriostat and heavy metal removal ...i.e. lead
3	10 micron filter pad	Fine sediment trap
4	coconut shell activated carbon	Removes chlorine, bad odor/taste, color, volatile organic contaminants ...i.e... trihalomethanes, pesticides, herbicides, mercury, arsenic, radon
5	10 micron filter pad	Fine sediment trap
6	cation exchange	Removes heavy metals...i.e...lead, cadmium, chrome, manganese
7	10 micron filter pad	Fine sediment trap
8	ultra fine GAC	Second layer provides extra protection against cancer-causing organic pollutants
9	calcite	Calcite is a mineral that energizes water & increases alkalinity - naturally. This raises the water's pH and lowers acidity. It also increases alkalinity, which many nutritionists recommend.
10	1 micron filter	Screens out cysts & protozoa, such as Giardia & Cryptosporidium

Own your own premium water system ~~~ use anytime, enjoy & save money!

Is the New Wave 10 Stage Water Filter tested and approved?

The 10 Stage Premium Water Filter has been extensively tested by Truesdale Laboratories, Inc. an EPA approved Lab which is certified to do filter testing and tests to the same EPA protocols as NSF.

How long does the replaceable water filter cartridge last?

Each filter cartridge should be changed after 1200 gallons or a maximum of 18 months. This would be approximately one year for a family of four, assuming they each drank: 1/2 gallon a day and the family washes fruits and vegetables in filtered water. After replacing the water filter run water through the unit for 2-3 minutes.

Note: It is increasingly important to use filtered water for a variety of kitchen needs besides drinking water. For example, more and more imported fruits and vegetables have been found to have giardia or cryptosporidium on them plus these hard shelled cysts can be present in your water supply. Filtered water is recommended for rice and pasta since boiling does not remove chlorine from water.

How do I change my water filter cartridge?

You simply unscrew the housing, remove the old cartridge and drop in a new water filter cartridge. To make it easier to open your housing, soak the entire unit in hot water (1 gallon) and white vinegar (1 tablespoon) for about 10-15 min. Take the unit out while it is still hot and turn the housing counter-clockwise. Replacement cartridges are available through Air, Water & Wellness or New Wave Enviro.
